

## **5, Fire hood for downlights**

Downlights, if not safely protected, can become a fire hazard as the whole cut in the ceiling to accomodate them compromises its fire resistance.

Fire hood is made from flexible, intumescent-coated glass cloth, which has a variant that can house a transformer for low-voltage fittings.

UK current building and wiring regulations have meant firehoods have become a necessity. Not only does a Firehood seal to stop fire penetration into the ceiling void left by fittings for up to one hour, but in normal use also offers ventilation to prevent the light fitting from overheating.

BS476 Part 22,23 Compliant

Various shapes and dimensions can be customized on request, OEM service is available.

### **Acoustic Firehood**

## **Kingwell Fibre Materials Co.,Ltd**

Acoustic Firehood also doubles as a sound proofing, minimising noise and vibrations.

Other features include:

- Reduce sound penetration
- Lightweight, easy to install with no extra support.
- Can be fitted from below
- Not affected by moisture (rot proof)
- Maintenance free

BS476 Part 22,23 Compliant
